Prisoners	0	0	0	0	0	0	0
School boarders	0	0	0	0	0	0	0
Total special populations	230	410	410	410	410	410	410

Notes

The table above shows the Popgroup estimates output for 2001 and 2009, the latter year forming the starting point for the remainder of the projected period.

These estimates and projections are calculated using a 2001 Census base for each Community Area (using 01/04/2009). They incorporate ONS mid-year estimates 2001-2009, Vital Statistics of births and deaths 2001-2009, Patient Registrations and National Population Projections.

These trend-based projections do not incorporate any housing policy figures and instead use recent trends to anticipate future levels of births, deaths and migration. This means assumptions for future levels of births, deaths and migration are based on observed levels mainly over the period 2001-2009. The population will be as if recent trends continue.

Special populations shown above are independently controlled to pre-defined age structures and population totals.

All population figures have been rounded independently to the nearest 10. 0 signifies less than 5. Figures may not sum due to rounding.

This report was compiled from a forecast produced on 27/10/2010 using POPGROUP software Developed by Bradford Andelin Associates
